

ABOUT THE PROGRAM

We introduce school students to the world of electronics & robotics through hands-on, project-based learning. Students explore electronics, programming, and mechanical design in a simple and engaging way, building real robots and understanding how technology works in real life. The program encourages creativity, problem-solving, and innovation, helping students develop practical skills for the future.

WHY THIS PROGRAM?

Hands-on robotics learning

Builds problem-solving skills

Simple & beginner-friendly

Encourages creativity

Real-world project experience

Develops logical thinking

WHERE IDEAS TURN
Into Real Robots

PROGRAM OUTCOMES

- *Build and program real working robots using basic electronics and coding concepts*
- *Apply coding, logical thinking, and problem-solving skills to create functional robotic solutions*

PROGRAM STRUCTURE

Grade 5 – RC Bot & Robo Soccer

- Learn basic robotics and robot movement
- Build and control a simple RC Bot
- Robo Soccer activities for teamwork and fun learning

Grade 6 – Beginner Robotics

- Basics of robotics and components
- Simple electronics and circuits
- Motor-based robot movement
- Build and control a robot

Grade 7 – Basics of Robotics

- Electronics and circuit fundamentals
- Arduino programming basics
- Motor control and movement
- Simple robot projects

Grade 8 – Intermediate Robotics

- Sensor integration (IR, Ultrasonic)
- Robot navigation and control
- Bluetooth/mobile control
- Multi-function robot systems

Grade 9 – Robotic Arm

- Human hand mechanics
- Servo motors and motion control
- Robotic wrist and finger design
- Prototype building and testing

ABOUT THE PROGRAM

This program introduces students to the basics of robotics through simple, hands-on activities. Students learn about basic components, simple electronics, and robot movement while building their first robot. The focus is on making technology easy, engaging, and interactive, helping students develop curiosity and confidence in working with robotics.

EXPLORE TECHNOLOGY *With Us*

GRADE 5 TECHNOLOGY & INNOVATION

RC BOT & ROBO SOCCER

WHY THIS PROGRAM?

Hands-on introduction to robotics

Fun-based learning through RC Bots

Improves creativity and problem-solving

Develops teamwork through Robo Soccer

Builds interest in STEM learning

Foundation for future robotics skills

Ideal starting point for beginners

WHERE IDEAS TURN
Into Real Robots

PROGRAM OUTCOMES

- Understand basic robot components
- Learn simple electronics and circuits
- Control basic robot movements
- Build and operate a simple robot

PROGRAM FLOW

Foundations of Robotics:

Introduction to robots and basic components

Basic Electronics :

Understanding motors, wheels, batteries, and circuits

Robot Movement Concepts:

Learning direction, motion, and control basics

RC Bot Building:

Assemble and build a beginner-friendly RC Bot

Remote Control Operation:

Learn wired/wireless bot control and navigation

Robo Soccer Challenge:

Team-based activities to improve teamwork.

FOR STUDENTS OF GRADE 5

ABOUT THE PROGRAM

This program introduces students to the basics of robotics through simple, hands-on activities. Students learn about basic components, simple electronics, and robot movement while building their first robot. The focus is on making technology easy, engaging, and interactive, helping students develop curiosity and confidence in working with robotics.

GRADE 6

TECHNOLOGY & INNOVATION

MILO BOT

WHY THIS PROGRAM?

Hands-on introduction to robotics

Hands-on introduction to robotics

Encourages curiosity and exploration

Fun, activity-based learning

Real-world project experience

Engaging and interactive sessions

Ideal starting point for beginners

WHERE IDEAS TURN
Into Real Robots

PROGRAM OUTCOMES

- Understand basic robot components
- Learn simple electronics and circuits
- Control basic robot movements
- Build and operate a simple robot

PROGRAM FLOW

Foundations of Robotics:

Introduction to robots and basic components

Electronics & Basics:

Simple circuits and Arduino fundamentals

Movement & Control:

Servo motors and basic robot movements

Robot Assembly:

Building and assembling the humanoid robot

Sensors & Interaction:

Ultrasonic and touch-based interaction

Final Project:

Working prototype and presentation

FOR STUDENTS OF GRADE 6

ABOUT THE PROGRAM

This program builds a strong foundation in robotics by introducing students to electronics, Arduino programming, motors, and sensors. Through hands-on projects, students learn how robots move, sense, and respond. The structured approach helps them understand core concepts while developing logical thinking and practical skills in building functional robots.

GRADE 7

TECHNOLOGY & INNOVATION

GEARY TECH

WHY THIS PROGRAM?

Strong foundation in robotics concepts

Introduces real hardware and coding

Enhances logical and analytical thinking

Step-by-step structured learning

Hands-on project-based approach

Encourages problem-solving skills

Prepares students for advanced robotics

WHERE IDEAS TURN
Into Real Robots

PROGRAM OUTCOMES

- Understand electronics and circuits
- Program basic Arduino applications
- Control motors and robot movement
- Use sensors for simple automation
- Build functional robot projects.

PROGRAM FLOW

Foundations :

Electronics, circuits, Arduino basics

Movement & Control :

Motors, drivers, robot movement

Sensors & Intelligence :

IR and ultrasonic sensors

Robot Projects :

Line follower, obstacle avoidance

Interaction & Control :

Hand Gesture Bot

Final Project :

Multi-mode robot & presentation

FOR STUDENTS
OF GRADE 7

ABOUT THE PROGRAM

This program focuses on developing intelligent robotic systems using sensors, automation, and wireless control. Students learn to build robots that can make decisions and interact with their environment. With a strong emphasis on system integration and real-world applications, the program enhances problem-solving and innovation skills.

EXPLORE TECHNOLOGY *With Us*

GRADE 8

TECHNOLOGY & INNOVATION

NEO BOT

PROGRAM

WHY THIS PROGRAM?

Focus on smart and interactive systems

Introduces automation concepts

Enhances critical thinking skills

Hands-on system integration learning

Exposure to real-world applications

Encourages innovation and design thinking

Bridges basics to advanced robotics

WHERE IDEAS TURN
Into Real Robots

PROGRAM OUTCOMES

- Integrate sensors for smart behavior
- Develop autonomous robot systems
- Implement Bluetooth/mobile control
- Build multi-functional robots
- Apply logic for decision-making systems

Advanced Foundations:

Electronics concepts, Arduino/ESP32 basics

Movement & Control :

Motors, drivers, components assembly and robot navigation

Sensors & Intelligence :

IR , ultrasonic sensors and sensors integration

Smart Robot Projects:

Line follower, obstacle avoidance, edge detection

Wireless Control:

Bluetooth, Internet and Voice Controlled

Final Project:

Smart robot system and presentation

FOR STUDENTS OF GRADE 8

ABOUT THE PROGRAM

This program introduces students to humanoid robotics by exploring the structure and movement of the human hand. Students learn how to replicate these movements using mechanical design, servo motors, and basic electronics. The program combines engineering concepts with creativity, enabling students to design and build functional robotic prototypes.

GRADE 9

TECHNOLOGY & INNOVATION

GRAB - IT

WHY THIS PROGRAM?

Introduces advanced robotics concepts

Connects biology with engineering

Focus on design and prototyping

Enhances analytical thinking

Encourages engineering creativity

Hands-on mechanical learning

Exposure to real-world applicationsg

WHERE IDEAS TURN
Into Real Robots

PROGRAM OUTCOMES

- Understand human hand mechanics
- Design robotic voice and internet based pick and place bot
- Apply servo-based motion control
- Build functional robotic prototypes
- Present engineering-based solutions

PROGRAM FLOW

Advanced Foundations:

Electronics concepts, Arduino/ESP32 basics

Mechanics & Design:

Finger joints, linkages, and palm structure

Motion & Control:

Servo motors and wrist movement through voice and AI based

Electronics & Systems:

Basic circuits and microcontroller concepts

Prototype Development:

Design and build robotic wrist and fingers

Final Project:

Working prototype and presentation

FOR STUDENTS
OF GRADE 9
