

ABOUT THE PROGRAM

This program introduces students to the basics of robotics through simple, hands-on activities. Students learn about basic components, simple electronics, and robot movement while building their first robot. The focus is on making technology easy, engaging, and interactive, helping students develop curiosity and confidence in working with robotics.

TECHNOLOGY &
INNOVATION

WHY THIS PROGRAM?

Hands-on introduction to robotics

Hands-on introduction to robotics

Encourages curiosity and exploration

Fun, activity-based learning

Real-world project experience

Engaging and interactive sessions

Ideal starting point for beginners

WHERE IDEAS TURN
Into Real Robots

PROGRAM OUTCOMES

- Understand basic robot components
- Learn simple electronics and circuits
- Control basic robot movements
- Build and operate a simple robot

PROGRAM FLOW

Foundations of Robotics:

Introduction to robots and basic components

Electronics & Basics:

Simple circuits and Arduino fundamentals

Movement & Control:

Servo motors and basic robot movements

Robot Assembly:

Building and assembling the humanoid robot

Sensors & Interaction:

Ultrasonic and touch-based interaction

Final Project:

Working prototype and presentation

FOR STUDENTS OF GRADE 6
